PROJECT DIESEL TANKS & BUNDS
PROCESSES

Stonbury Limited, specialist contractors to the water and power industries are currently carrying out a programme of works to improve and extend the life of diesel tanks and bunds to a number of water treatment works.

All surfaces to the tanks and bunds have been cleaned and prepared using specialist precision dustless blasting equipment, ensuring no contamination to other areas of the water treatment plant.

Following preparation, all surfaces of the diesel tanks and pipe work have been protected by the application of a 3 coat high performance polyurethane coating.

Bund areas have been locally repaired and protected by the application of a 2 coat chemically resistant epoxy coating.
